

**Gilles Trystram**, *AgroParisTech, France*

**Gilles Trystram** is Professor and General Director at AgroParisTech. After gaining a degree in Process Control at Nancy University and a Ph. D. he focuses the research on Food Process engineering applications, mainly thermal processing of food, looking for modelling of unit operations in order to develop algorithm able to help for design and optimisation of the product final qualities. Research works are dedicated to modelling of food unit operation (frying, baking, drying, fermentation), modelling of food and looking for sustainability of food and food processes. Researches are part of numerous International research projects and collaborations.

He is member of numerous scientific committees, and international editorial Board of scientific journal and of the French academy for engineering.
